Software requirements specification

Section 1: Product overview and summary

Section 2: Development/operating/maintenance environments

Section 3: External interfaces and data flows

    User displays and report formats

    User command summary

    High-level data flow diagrams

    Logical data sources and sinks

    Logical data stores

    Logical data dictionary

Section 4: Functional specifications

Section 5: Performance requirements

Section 6: Exception conditions/exception handling

Section 7: Early subsets and implementation priorities

Section 8: Foreseeable modifications and enhancements

Section 9: Acceptance criteria

    Functional and performance tests

    Documentation standards

Section 10: Design guidelines (hints and constraints)

Section 11: Sources of information

Section 12: Glossary of terms
